NOVELTY - If the door of the refrigerator is left open, or the electrical supply fails for more than a pre-determined time, a visible or audible alarm is operated. This alarm may be at a remote location, linked by telephone or other telecommunications system. The time of the occurrence and its duration are recorded electronically in an active or passive data memory. The system may be used to monitor other parameters in or out of the refrigerator.

Use: Detecting situations which may cause spoilage to contents of refrigerator.

Advantage: Does not require human monitoring (3pp)
